Goto Jenkins Home page

Goto Manage Jenkins

Goto Configure system

We will go down here and we will identify email notification section

Here we can configure our email setup, so let us take a example of gmail set up.

we have to enter SMTP details for gmail

smtp.gmail.com   ---- here if you want to configure any other email smtp details we can find out on google

here now click on advanced button

select use smtp authontication check box

here we have to provide details

user name : your email id from which id you are thinking to send emails to others (spraokethineni@gmail.com)

pasword : Password

Use SSL needs to be checked

SMTP Port number we have to provide for gmail   : 465

at last we can test also wether it is working or not with test check box.

If it is not working one more setting needs to be done in gmail

And Click on My account

And click on signing to google

And Click on allow less secure apps button.
